Microsoft AI · Product Designer

Mountain View | May 2025 to Present

I drive Copilot Code design, helping knowledge workers build software with natural language grounded in work context. I ship production frontend code and build evaluation tools that use our product to improve its raw outputs.

Before this, my work spanned consumer Copilot, from core chat and voice to search, memory, personalization, video generation, and adaptive interfaces.

Figma · AI Model Design Lead

New York City | Feb. 2025 to May 2025

Brought in to establish the AI model design team. Grew the team to 12 and defined good design with ML engineers. Owned output quality for the model behind our first iteration of Figma Make, launched during Config SF 2025.

Spatial · Product Designer

San Francisco | Feb. 2022 to Feb. 2025

Steered through our pivots from a VR collaboration tool into a UGC platform for immersive environments, refining tools for 3D social experiences as the product grew from scratch to over 14M users and 124k creators in 2M spaces.
